1 Introduction - Problem Statement

Understanding the Problem

- **Growing Market:** The used and refurbished device market has expanded significantly due to cost-effectiveness for consumers and businesses.
- **Pricing Challenge:**
 - Too low → Financial losses for sellers
 - Too high → Poor sales performance
 - Consumers struggle to determine fair prices
- **Need for a Solution:**
 - A data-driven approach is essential to accurately predict used phone and tablet prices.

Used Phones & Tablets Price Analysis

This web app visualizes data from the [Used Phones & Tablets Prices dataset](#). You can explore price trends based on brand, RAM, internal storage, and other features.

3 Price Prediction Using Multiple Models

Price Prediction - Regression Problem

- We explored multiple models to predict used device prices:
 - **Linear Regression** – Established a baseline performance
 - **Neural Networks** – Captured complex patterns in data
 - **K-Nearest Neighbors (KNN)** – Based on similarity to past data points
 - **Random Forest** – Bagging learning for improved accuracy
 - **Support Vector Machine (SVM)** – Effective for high-dimensional data
 - **XGBoost** – Optimized gradient boosting for superior performance

4 Results and Key Observations

Results

Key Findings:

- **The original price of a device is the strongest predictor**
 - This aligns with market trends: high-end phones hold their value better.
- **Tree-based models (Random Forest, XGBoost) and SVM performed best**, with SVM achieving the **lowest RMSE of 0.3011**.
- **KNN showed surprising efficiency**, indicating that price prediction can benefit from finding similar past sales.
- **Neural network could improve with more data points**, but struggled slightly compared to tree-based models.

Model	RMSE	MAE
<i>Linear Regression</i>	0.371775	0.289166
<i>NN Model</i>	0.320985	0.247323
<i>KNN Model</i>	0.307225	0.233728
<i>Random Forest</i>	0.301147	0.233340
<i>SVM Model</i>	0.301137	0.228863
<i>XGBoost Model</i>	0.306823	0.239365

5 Conclusion and Further Scope

Conclusion and Further Scope

Key Takeaways and Future Work

- **Data Freshness is Critical** – The smartphone market evolves rapidly, so models need frequent updates.
- **Enhancing our Web Demo** – Future work could allow users (sellers) to enter phone details and get an estimated price.
- **Feature Engineering** – Exploring additional data like phone condition, repair history, and market trends could further improve predictions.
- **Hyperparameter Tuning** – Optimizing models like XGBoost for even better accuracy.

Thank you!
